VANTIQ

Unlock New Revenue

with Vantiq

Technology is evolving at a rapid pace as new technologies such as 5G and Edge computing enable new ways of doing business. Meanwhile, your customers are struggling with digital transformation as they try to increase agility and efficiency in their existing businesses and expand into new ones. These projects take large amounts of time and resources and commonly fail to meet their objectives.

An estimated 84% of Digital Transformation projects fail to meet their objectives

Vantiq's Digital Transformation Platform allows you to leverage 5G and Edge computing to provide your customers with dynamic, scalable solutions that can be built and deployed quickly. These branded applications can be built once and deployed for multiple customers and can be customized easily to support bespoke environments.

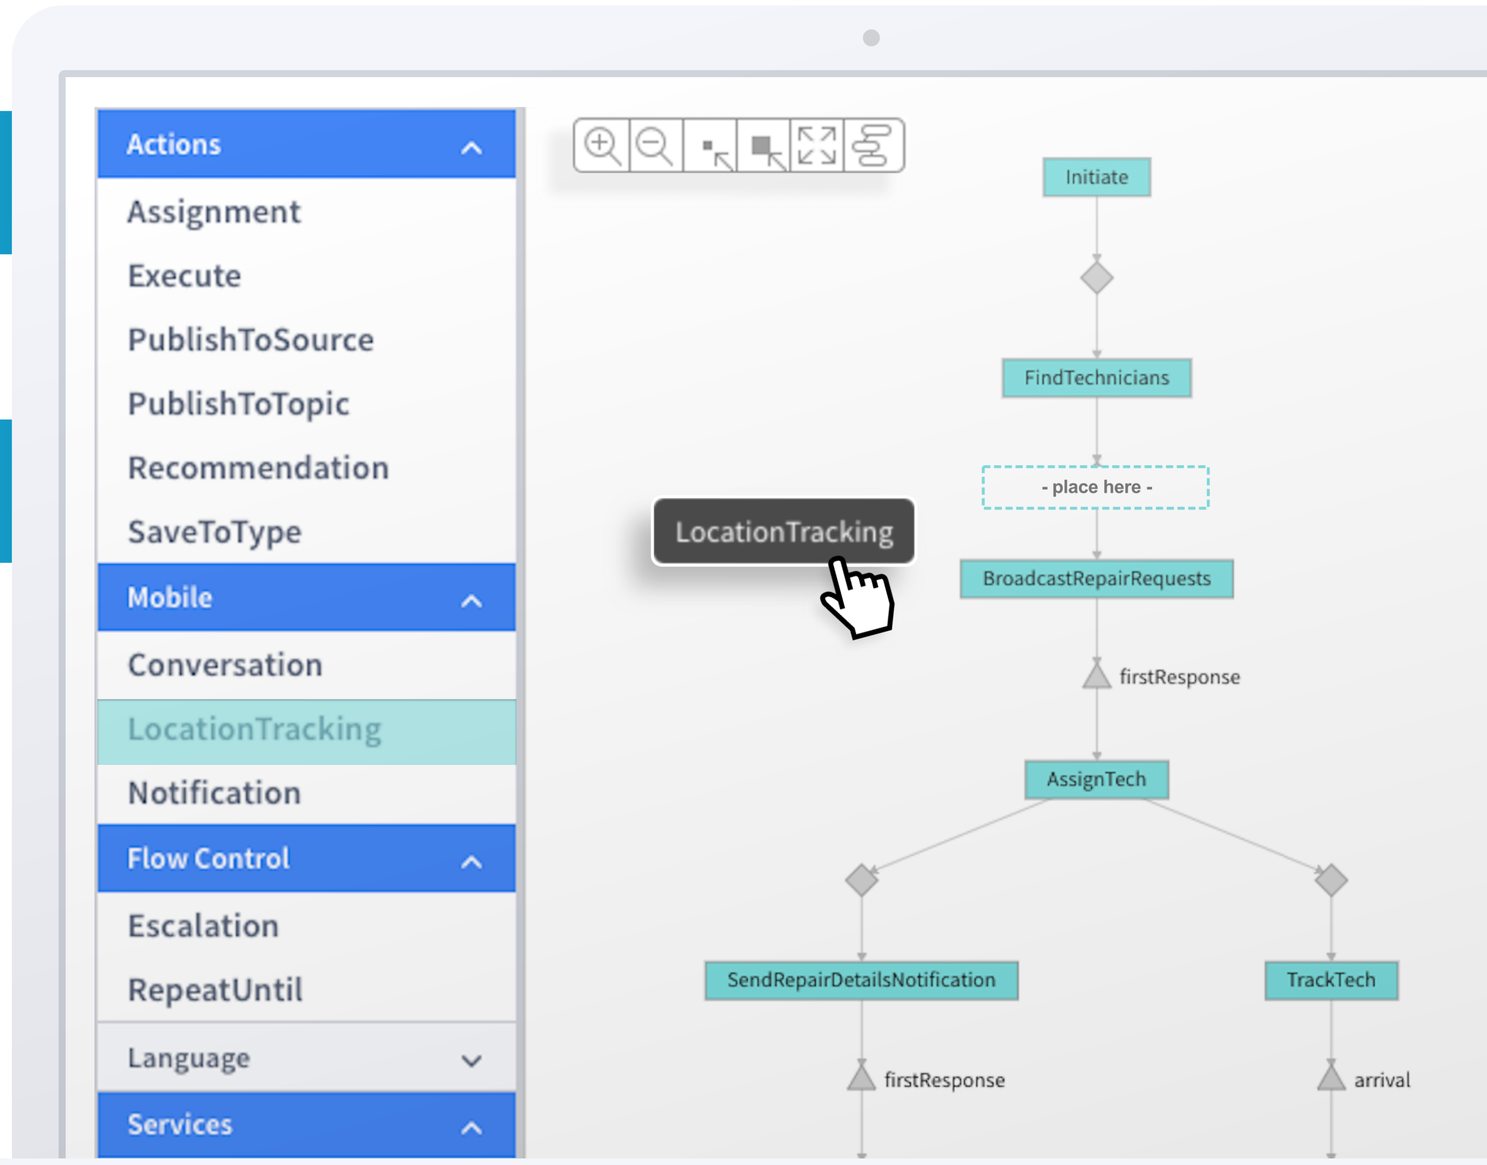
Quickly Build
New Applications

Quickly Solve
New Problems

Vantiq's agile, full lifecycle development platform allows you to build in weeks with a small team what would otherwise take a large team months or years. Once built, maintenance and updates are easy to implement and deploy since Vantiq manages the entire lifecycle.



Scalability is built in.

Applications can start small and local and be rolled out to one location or thousands of locations at the click of a button. Vantiq manages the deployment process so you pick where you want the applications to run and we take care of the rest. Applications can run as close to the customer as necessary to provide:

- Low latency for delay sensitive applications
- Increased scalability, from one to thousands of locations
- Better resilience so that services can be available in the event of network issues
- Better security to keep sensitive data local

New Engagement possibilities

Vantiq allows you to address new industries and open up new markets. All industries are realizing the need for digital transformation and the Vantiq platform opens up endless opportunities.

Vantiq allows you to engage with your customers in new ways. Customers that require connectivity can become a market for business applications and customers in search of business applications can become a market for connectivity services.

VANTIQ

Vantiq powers mission-critical real-time business operations with our agile event-driven architecture (EDA) application development platform. Vantiq dramatically reduces time-to-market, significantly lowers development and maintenance costs, and provides maximum agility in response to constantly changing operational requirements.
