

Intelligence in real-time made easy

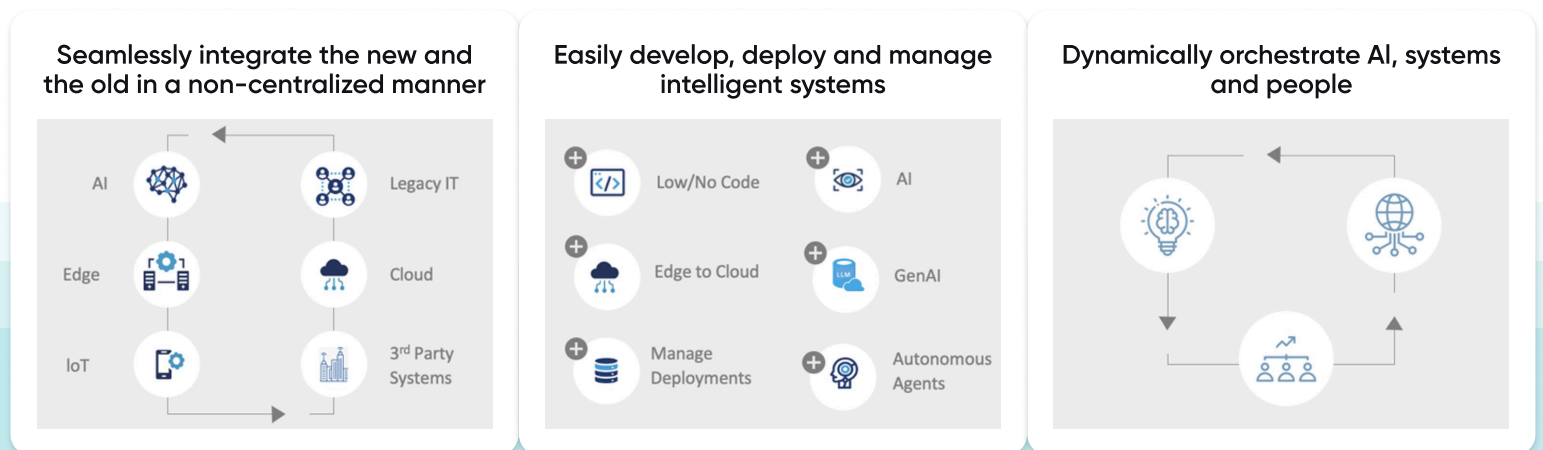

VantIQ is a software platform for rapidly creating and operating intelligent systems powered by AI. It integrates diverse data sources, distributed systems and advanced AI enabling organizations to design, deploy, operate and scale complex applications effortlessly. VantIQ empowers responses to real-time events, enhances decision-making and improves operational efficiency—all while reducing the burden of managing complex technology ecosystems.

Today's chaos in technology *Does that diagram look familiar?*

VantIQ changes the game

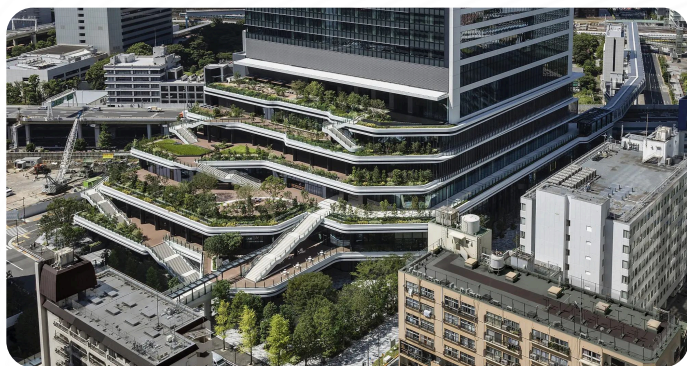

Businesses struggle to integrate systems, legacy infrastructures, IoT and AI, leading to disconnected apps and chaos. VantIQ simplifies this by seamlessly orchestrating new and existing components with unmatched speed and agility accelerating development and deployment by up to 90%, reducing complexity, lowering costs and enabling scalable, AI-driven applications in weeks. VantIQ empowers you to build, operate, and adapt solutions with ease and control.

Explore how VantIQ distinguishes itself from other platforms in the comparison table below:

	VANTIQ	OTHERS
Building applications	Enables you to build, deploy and operate applications rapidly and easily	Often delivers a black box application to you
	Makes it simple and extremely quick for you to adapt and improve on your timeframes	Often forces reliance on them as you wait for the changes to be made for you
	Includes hardened-from-inception prototypes with built in agility, scalability, reliability and security	Normally requires security, scalability, etc. to be added into prototypes
	Utilizes visual low-code components to show how the application is constructed, making modifications quick and easy	Leverages traditional software code, making it difficult for end users to understand or modify
Connect components	Simplifies the complex and chaos by orchestrating everything	Built applications get more complex as pieces and parts increase
	Natively connects most anything from the physical and digital worlds	Often operates only in the digital world
	Utilizes governance and patented technology to improve AI trustworthiness and reduce GenAI hallucinations	Primarily leverages services and data scientists for improvements
Core / company DNA	Identifies, responds and adapts to events in real-time—in memory rather than storage	Uses databases / big data to predict into the future
	Is real-time, event driven	Is data driven
	Is natively designed to utilize GenAI, AI agents, Agentic AI, Predictive AI and much more	Is often predictive with additional technologies requiring custom services engagements
Security / operations	Is designed to be deployed, operated and scaled in any combination of edge to cloud	Typically relies heavily on cloud infrastructure and databases
	Natively operates as flexible and robust military-grade distributed mesh networks with federated and autonomous operations	Requires multiple components with strict connectivity requirements, adding complexity and inflexibility
Control / data	Allows you to own, understand, manage and completely control your agentic systems and intelligent applications	Often builds and controls the black boxes, causing reliance on them
	Most data (noise) is filtered out, as only critical events of interest are processed, reducing latency and minimizing data transmission and storage	Normally requires all data be stored in order to be leveraged, complicating storage and data security requirements

Build smarter solutions in days not years

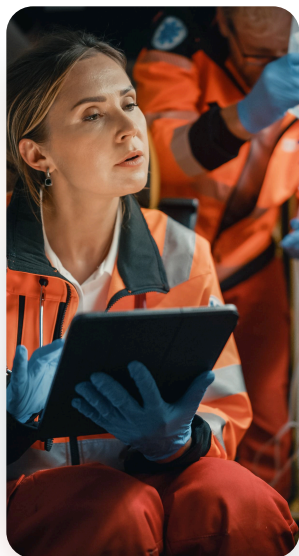

Unlike providers of prepackaged solutions, Vantiq empowers businesses and integrators to create tailored solutions. It's fast, flexible, and adapts to evolving needs.

Take SoftBank, for example. After two years and 288 person-months of effort with other tools, they turned to Vantiq. In just three months and 9 person-months, their intelligent system was up and running—a testament to Vantiq's unmatched speed and agility.

Unlocking Possibilities with Vantiq

Imagine a city's disaster response system detecting a flood. Vantiq acts as the brain, orchestrating real-time actions: issuing alerts, mobilizing emergency dispatch, and updating stakeholders. Vantiq turns raw data into impactful actions, bridging the gap between **"What happened?"** and **"Here's what we're doing about it."**

From smart buildings to intelligent ambulances and force readiness solutions, Vantiq-powered innovations are reshaping industries and saving lives. Vantiq gives you the tools to lead the next breakthrough, enabling faster development, agility, and complete control over your data and solutions.

Be the hero.

Contact Vantiq today to learn more and see how you can lead the future with innovative solutions built for the challenges of tomorrow
