

The Low-Code Platform for Real-Time Digital Orchestration

Advancements in AI and Medical IoT offer unique opportunities to improve patient outcomes, drive operational efficiencies and enable more cost-effective care. However, realizing the full potential of these technologies is limited by the ability to integrate them with disparate systems and into healthcare workflows.

Vantiq makes it easy

to ingest data from any number of devices, leverage AI and generative AI for situational awareness, and automatically orchestrate healthcare outcomes.

This enables people, legacy systems, and cutting-edge technology to be connected into intelligent workflows like never before.

50% of all healthcare provider digital transformation investments will focus on increasing situational awareness surrounding the patient and provider.

Gartner Strategic Roadmap for the Real-Time Health System

Solutions Built With Vantiq

**AI-Enabled
Precision Health &
Wellness**

**Real-Time
Clinical Command
Center**

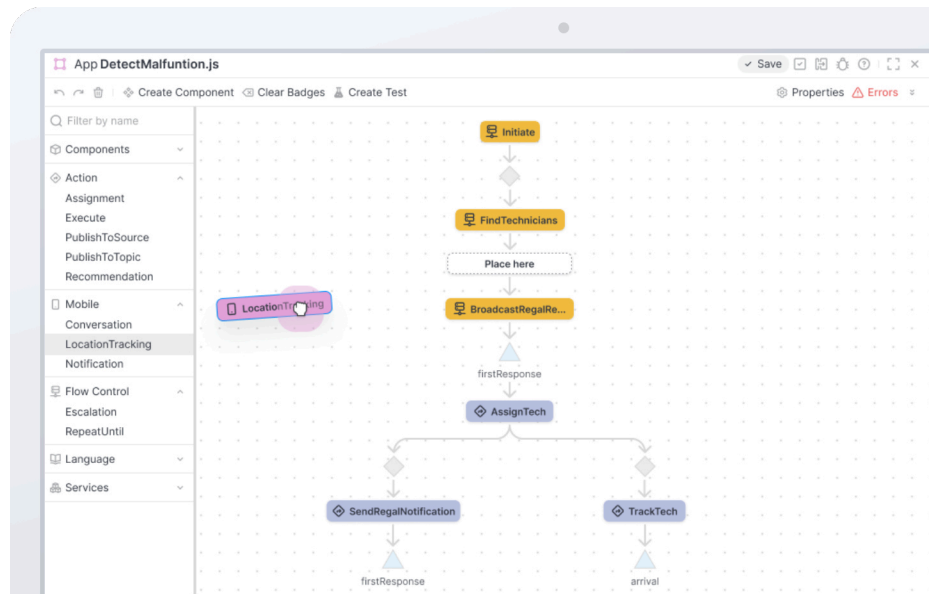

**Intelligent
Emergency
Response &
Orchestration**

**Generative AI-
Augmented
Clinical Decision
Support**

Quickly Build New Applications Quickly Solve New Problems

Vantiq platform significantly reduces the time needed to achieve value, increasing agility by simplifying the development process for creators.

Real-Time

Vantiq's real-time platform enables situationally aware and continuously updated applications that can sense, analyze, and act on high volumes of streaming data for mission-critical decision making and automation.

Event Driven

Vantiq leverages a dynamic and reactive EDA (event driven architecture) that enables loosely coupled, highly agile applications that analyze and act on streaming data for real-time intelligence.

Edge to Cloud

Built with a highly scalable distributed architecture, Vantiq workloads are modular and portable so you can move the application logic out to where the data (and action) is for optimal speed, performance, and privacy.

Agile

Applications can be built in a matter of days, using a drag and drop, low-code platform that covers every step of the software lifecycle including development, testing, deployment, and operations.

Generative AI

Vantiq combines Generative AI with up-to-the-moment, situationally aware insights to enable smart applications that can tell you what is happening automatically without needing a human to prompt the system.
