

Real-Time Orchestration for Smart Stadiums

Increase revenue, improve fan and VIP experience, and strengthen operational resilience by unifying siloed smart stadium systems to deliver true real-time situational awareness and automated actions.

The Vantiq Platform

Vantiq is a real-time orchestration platform that powers AI-driven automation for smart stadiums. It enables stadiums to coordinate a wide variety of systems and devices – including VIP tracking, concessions, cameras, mobile applications, ticketing, parking, and security – into a unified, event-driven operating environment.

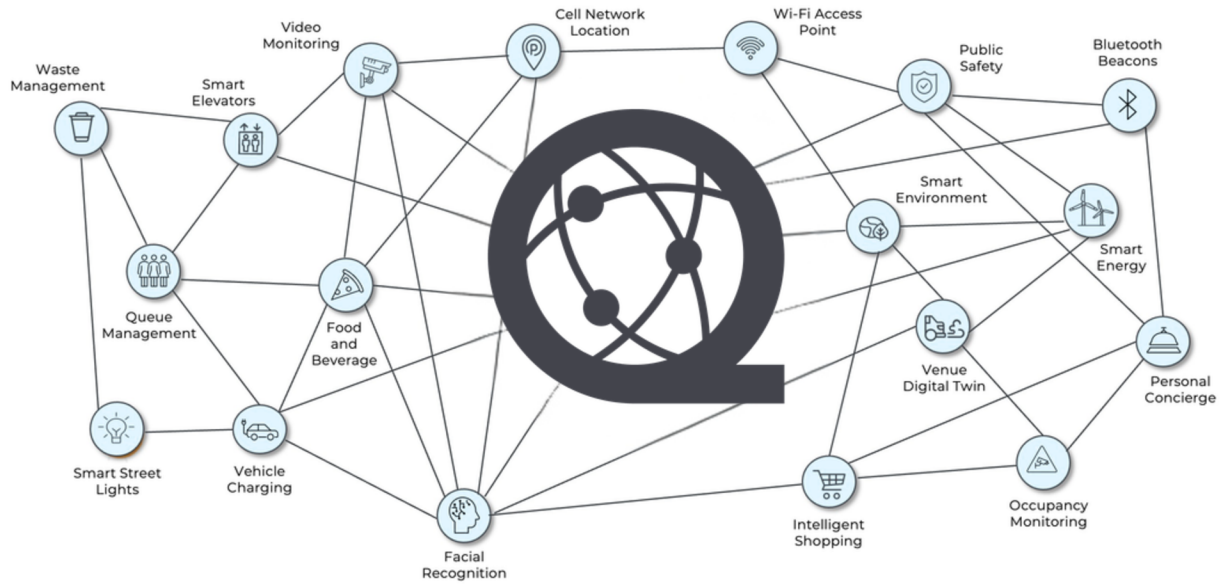

Real-Time Integration
Integrates existing stadium systems, devices, and data sources in real time

Orchestration Across Systems
Orchestrates AI models, devices, systems, and teams as one adaptive operating environment

Enterprise-Grade
Delivers reliability, scalability, and low-millisecond latencies at massive scale

\$20 Increase spend if lines were cut in half	45% Of fans have abandoned concessions without purchase	30 Min Average time spent in concession lines in US	\$12B Potential lost revenue due to long wait times
---	---	---	---

REAL-TIME ORCHESTRATION ACROSS DISPARATE SYSTEMS

Drive More Revenue Per Fan / Guest

Long lines, delayed service, and inventory gaps reduce per-person spending. Real-time coordination ensures revenue opportunities are not missed.

- Optimize queue flow and staffing based on live conditions
- Coordinate VIP arrival and location, as well as inventory replenishment in real time

Increase the ROI of Your Technology Stack

Adding devices, vendors, and AI capabilities should not increase complexity or reduce ROI.

- Integrate legacy and modern systems without architectural redesign
- Scale as new services, devices, and AI models are introduced
- Layer in orchestration and AI-powered automation capabilities without changing your technology stack

Strengthen Security & Resilience

In high-capacity venues, seconds matter. Siloed systems slow response and increase risk.

- Enable real time coordinated response across cellular, wi-fi, video and access systems
- Provide a unified operational view throughout the venue to improve situational awareness

See how real-time orchestration and AI-driven automation can transform your stadium operations

Schedule a live demonstration and discover what's possible.
